

— direct population ··· forward moments - - - reduced-model fit, 1σ noise ● fitted data

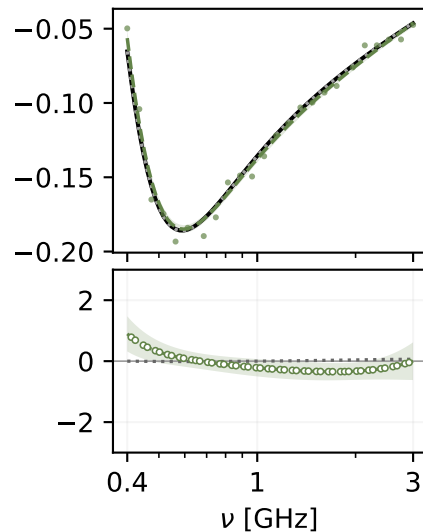

(a) Intensity I

(b) Stokes Q

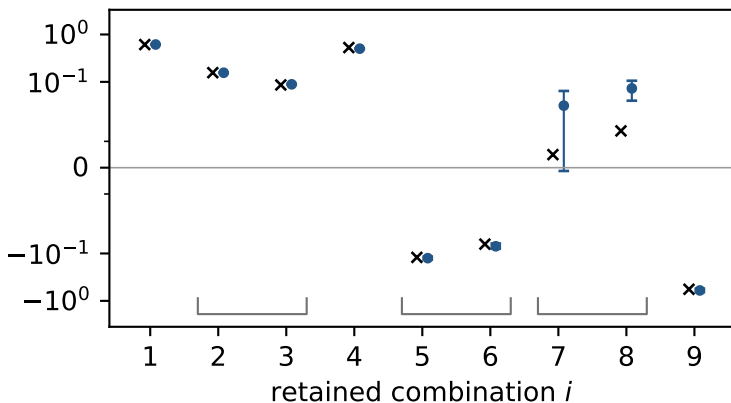

(c) Stokes U

residuals: open circles mark the 48 withheld centres

(d) 9 fitted combinations

× true β_i — equal s_i : subspace only ● fitted $\pm 1/s_i$

(e) Two-step reduction

a 60 slots $\xrightarrow{\quad} q = Ta$ 30 groups
step 1: exact grouping, no data
